

Pipers' Choice Humidity regulated carry Case/ Flight case (HumiCase)

We hope you enjoy your new Bagpipe case. We call it our Humicase by Pipers' Choice. It has been designed with travel in mind. This case is under Airline approved size for carry on luggage. This will allow you to carry your bagpipe on the plane with you. The case also uses Boveda Gels to regulate your case to optimum playing humidity to keep your instrument in its happy place. You can change the boveda gels as required depending on what area you live, as it will dry out more in dry climates and do the reverse in other climates. We find your instrument is best kept around 50-55% humidity in your case, however this will change depending on your wetness as a player. We hope you enjoy your new case as much as we do.

For replacement Gels, see your local retailer or seek us out at piperschoice.com

To store your Pipe in the case, simply follow the pictures below.

1. Drone Tops storage: Simply remove your drone tops and secure them in the carry pouch. You can then zip the compartment closed.

2. Humidity control and Boveda Gels: your Humicase comes with the 4 provided Gels. They are inside ziplock, remove from Ziplock and place back in sealed box. You will know its time to change the gels when they have gone hard. Then simply replace.

3. Storage of Bagpipe: Place your Pipe in the case as seen below. This allows for best storage and travel position, and then you can secure the pipe with the strap, and then see the desired humidity reader.

4. Simply Enjoy: Feel free to contact us anytime with questions or for other products at Piperschoice.com
